

# The Incredible Bubble Show Activity Page

**You** can make great bubble solution at home.

Mix 1 cup of dishwashing soap into 10 cups of tap water. Stir gently to mix the soap and water. Non-Ultra Joy dishwashing soap works best. Dollar General and Family Dollar stores usually have non-Ultra Joy. Remember not to taste or drink the bubble solution or get it in your eyes.

**Bubbles** that float in the air are always: \_\_\_\_\_  
Choose from: square, triangle, round, rectangle, oval

**What** size bubbles can you make?  
Circle all the words that apply: tiny, small, big, giant, huge, large

**You** need three things to make bubbles: a soap and water mixture (bubble solution), a bubble maker, and air. Where can you find the air?

\_\_\_\_\_

**Use** your imagination to put on a pair of "bubble eye" glasses. Look at things around your house that: have an opening to stretch the bubble solution across, have no sharp edges that will hurt your hands, and are light enough to wave over your head. If something has all three things, it might make a great bubble maker. What bubble makers did you find?

\_\_\_\_\_

**What** happens when you touch a bubble? \_\_\_\_\_

**How** long do bubbles last? \_\_\_\_\_  
Choose from: a few seconds, a few minutes, a few hours, forever

*Enjoy making bubbles - learning plus lots of good, clean fun!*

## Create a "bubble window" for Incredible Bubbles

**Materials:** 2 straight drinking straws, 48" - 56" of yarn or string, ruler and scissors.

Insert the yarn or string into both straws. Arrange the straws on a flat surface to make a rectangle. The longest section should be between 12" & 14" wide. Tie a knot, tie a second knot in the same place. Trim the excess and pull the knot into one of the straws.

Holding the straws together with both hands, dip the bubble window and your fingers into your container of bubble solution. Remove the bubble window and let the excess bubbles drip back into the container.

Carefully open the bubble window holding onto the straws. Gather air inside the bubble window and touch the straws together to release a bubble. The more air inside, the larger the bubble.
